A simpler operating picture

carsERP is a focused concept for organizing core automotive commerce workflows in one operational view. Scope can be tailored to the business model, team roles, existing data and the integrations that matter.

Core scope presented in this overview

01

Inventory

Organize vehicle records, details and operating status in a shared view.

02

Customers and leads

Keep customer details, lead context and follow-up records connected.

03

Deals and sales

Track opportunities and sales progress through defined operating stages.

04

Costs and profitability

Bring deal costs and profitability visibility together using available data.

05

Documents

Associate relevant documents with the records and workflows they support.

06

Reports

Produce operational outputs that support review and informed follow-up.

Workshop and spare-parts workflows can be assessed as adaptable options during discovery. They are not presented here as confirmed standard modules.

Shape carsERP around the operation

Explore

Map the automotive business model, roles and records.

Scope

Confirm modules, access, data and integrations.

Prepare

Plan configuration, build, migration and review.

Adopt

Validate workflows, launch and improve in stages.

A focused discovery can define

- Operating workflow map
- Data and migration needs
- Acceptance scenarios
- Roles and permissions
- Integration boundaries
- Rollout and support options

Ask for a carsERP conversation

Share your current vehicle, customer and deal workflow, the records you use and the visibility you need. We can then discuss scope, demonstration needs and pricing context.
